*Harvard University*

Working on the algorithmic-level to improve efficiency of deep neural network deployment in the compute-in-memory crossbar architecture. Particularly interested in reducing bottlenecks such as data conversions, nonidealities, programming time and weight mapping.

### iOwlT: Sound Geolocalization System ([link](#))

2019–2020

*Federal University of Pernambuco*

Developed a system using neural networks, adaptive filtering and real-time processing in FPGAs to recognize sound events and determine gun shooters location on a mobile application. Earned 3 international awards at InnovateFPGA 2019 in China (Top 0.7%).

### Lock-in: Nano-Volt Signal Amplifier ([link](#))

2019–2020

*Federal University of Pernambuco*

Design and optimization of a phase-sensitive lock-in amplifier advised by the former Minister of Science and Technology of Brazil Prof. Sergio Rezende to investigate magnetic properties of IrMn/Py thin films using MOKE technique.

### iTraffic: Smart Semaphore Network ([link](#))

2017

*Federal University of Pernambuco*

Design and proposal of an internet of things intelligent system to dynamically choose traffic lights timing to optimize vehicle flow on urban roads using genetic algorithm. Achieved 130% improvement in the average speed of cars in tested tracks.

### Maracatronics: Robotics Team ([link](#))

2017

*Federal University of Pernambuco*

Member of the collective autonomous soccer sub-team, acting on robots control on Tiva-C microcontroller, computer vision mapping and tracking, and intelligent robots decision-making strategies. Achieved 5th Place at XVI Latin American Robotics Competition.
